

We offer a specialized service to safely transport all types of equine

In Avianca Cargo we offer a specialized service to ensure the safe transportation of horses, ponies and all types of equine. Our standardized procedures guarantee that the animals are carefully handled so they arrive on time and in optimum conditions to their final destination.

ANIMAL HANDLER

Given the delicate care that this type of shipments require, it is absolutely necessary that a qualified caretaker accompanies the equine.

Arrangements for the transportation of the Animal Handlers must be made in advance and according to Avianca Cargo's policies; the Animal Handler must contact our Sales Executives to get information regarding this process.

The Animal Handler must have the following documents:

- **Certificate and evaluation of the Supernumerary Course imparted by Avianca Cargo**
- **Valid Visas (when necessary)**
- **Valid passport**

TRANSPORTATION REQUISITES

In order to guarantee the well-being and comfort of the animal during its transportation, the shipper must comply with several basic principles.

Following are some recommendations that the shipper or freight forwarder must keep in mind when shipping equine:

- Before receiving the animals, the shipper must corroborate with the different countries (origin, destination and transit) all the legal requisites and certifications related to sanitation and the well-being of the animals.
- In order to allow immunity to develop, vaccinations must be applied in advance.
- The shipper must coordinate the pertinent food arrangements, if it is necessary to feed the animal while in transit.
- The shipper is responsible to ensure the proper documentation, and correct packaging of the shipment.

SPECIAL RECOMMENDATIONS

- Animal Handlers must be properly trained according to IATA's Live Animals Manual.
- The stalls must meet the regulations stated in the IATA Live Animals Manual and all government's requirements in the countries of origin, transit and destination.
- If positioning and/or repositioning of the stalls is needed, the shipper must inform the carrier when making the reservation for the shipment.
- Weekends, holidays and airport closures must be considered in transit time when planning the shipment.
- The shipper must contact the veterinary authorities in the country of origin and destination for the emission of sanitary certificates and proper documentation.
